

Assignment 3.1 Creating Ansible Setup & Installing MariaDB Using Playbook	
Name: Santiago, Jalene	Date: January 6, 2025
Course & Section: CPE212 - CPE31S1	Instructor: Engr. Robin Valenzuela

VSCODE

The screenshot shows the VS Code interface with the Explorer sidebar on the left displaying the file structure for 'CPE212_31S1', including 'ansible.cfg', 'inventory.cfg', and 'inventory.ini'. The 'inventory.ini' file is selected and its content is visible in the main editor. The file contains two groups: 'db_servers' and 'web_servers'. The 'web_servers' group includes a host named 'server1' with associated variables for 'ansible_host', 'ansible_user', and 'target_user'.

```

inventory.ini
1  [db_servers]
2
3  [web_servers]
4  server1 ansible_host=192.168.56.102 ansible_user=jalene target_user=jalene

```

OUTPUT

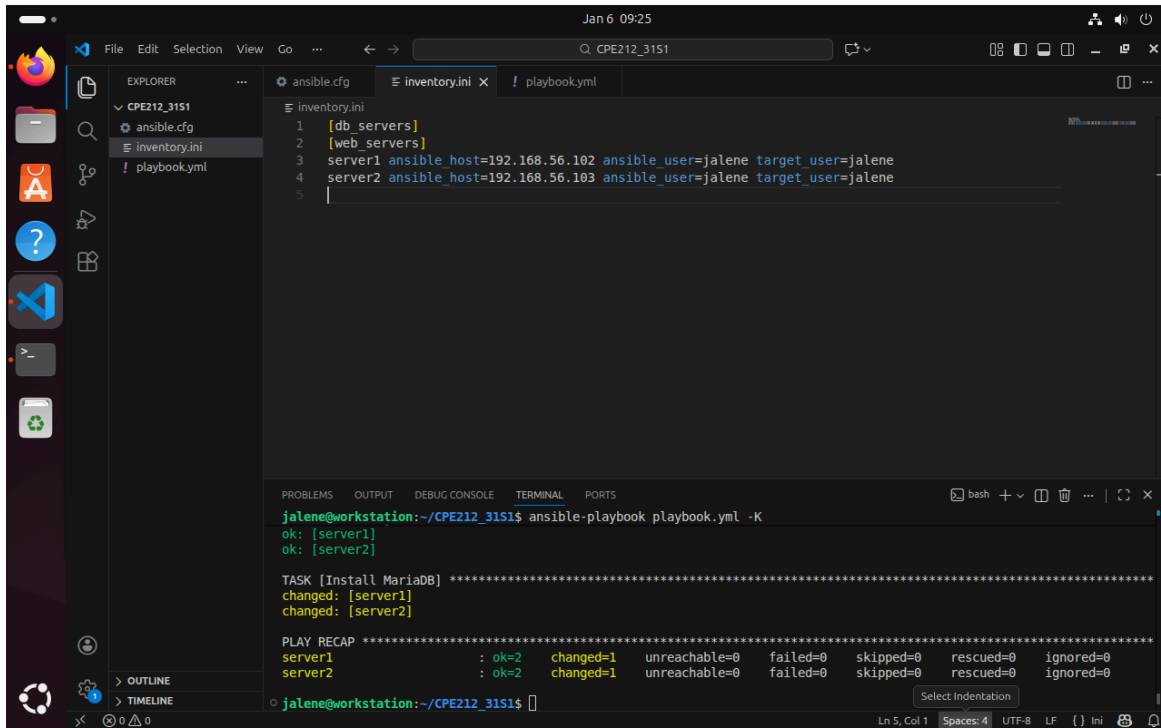

The screenshot shows a terminal window with the prompt 'jalene@workstation: ~/CPE212_31S1'. The user has executed the command 'ansible all -m ping'. The output shows that the command was successful for 'server1', displaying 'ansible_facts' (including the discovered python interpreter path), 'changed' status (false), and the 'ping' result ('pong').

```

jalene@workstation: ~/CPE212_31S1
jalene@workstation:~/CPE212_31S1$ ansible all -m ping
server1 | SUCCESS => {
    "ansible_facts": {
        "discovered_interpreter_python": "/usr/bin/python3"
    },
    "changed": false,
    "ping": "pong"
}
jalene@workstation:~/CPE212_31S1$

```

INSTALLING MARIADB USING PLAYBOOK

The screenshot shows the VS Code interface with the `inventory.ini` file open. The file contains the following content:

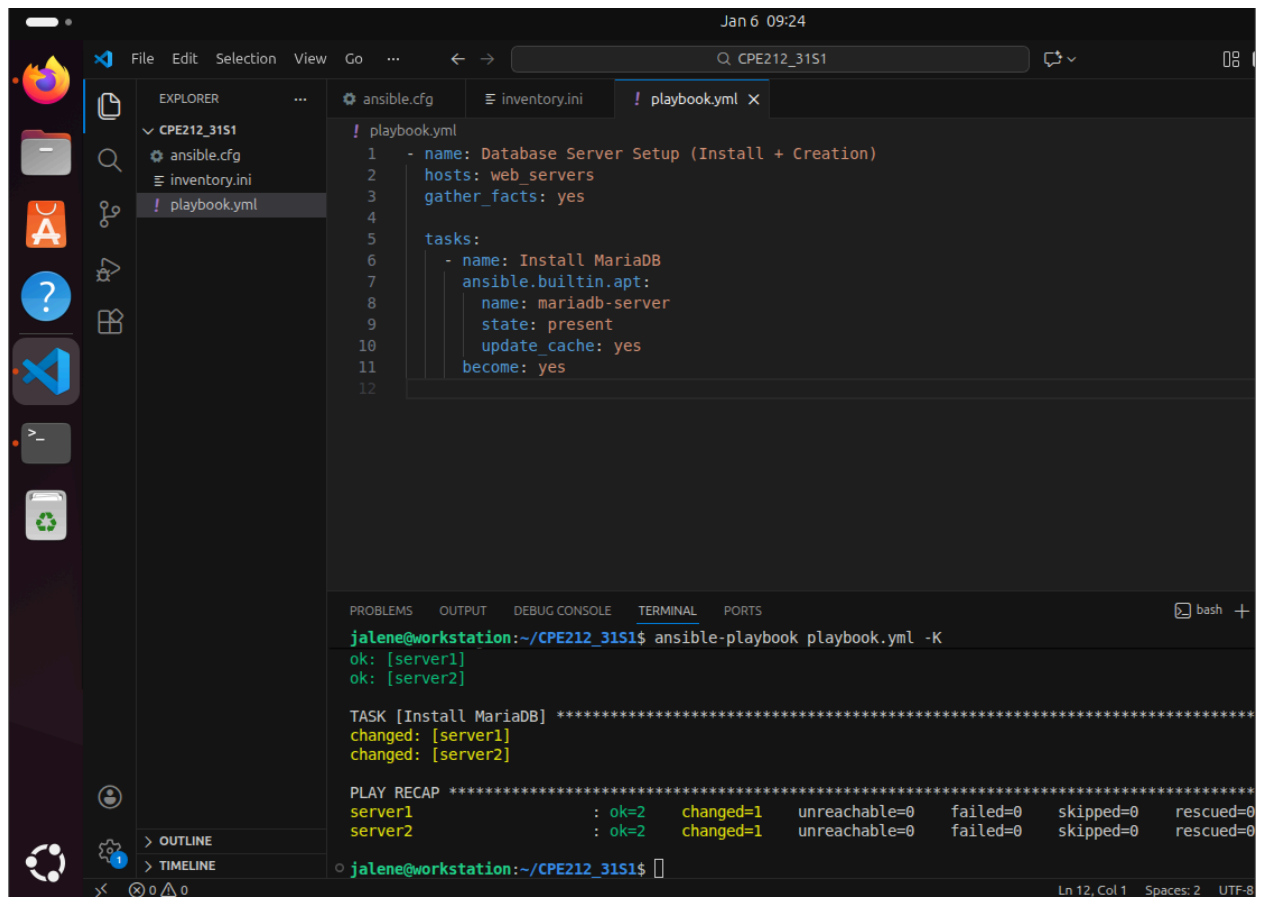

```
1 [db_servers]
2 [web_servers]
3 server1 ansible_host=192.168.56.102 ansible_user=jalene target_user=jalene
4 server2 ansible_host=192.168.56.103 ansible_user=jalene target_user=jalene
5
```

The terminal shows the command `ansible-playbook playbook.yml -K` being executed. The output indicates that the playbooks were successful on both `server1` and `server2`.

```
jalene@workstation:~/CPE212_31S1$ ansible-playbook playbook.yml -K
ok: [server1]
ok: [server2]

TASK [Install MariaDB] *****
changed: [server1]
changed: [server2]

PLAY RECAP *****
server1      : ok=2    changed=1    unreachable=0    failed=0    skipped=0    rescued=0    ignored=0
server2      : ok=2    changed=1    unreachable=0    failed=0    skipped=0    rescued=0    ignored=0
jalene@workstation:~/CPE212_31S1$
```

The screenshot shows the VS Code interface with the `playbook.yml` file open. The file contains the following content:

```
1 - name: Database Server Setup (Install + Creation)
2   hosts: web_servers
3   gather_facts: yes
4
5   tasks:
6     - name: Install MariaDB
7       ansible.builtin apt:
8         name: mariadb-server
9         state: present
10        update_cache: yes
11        become: yes
12
```

The terminal shows the command `ansible-playbook playbook.yml -K` being executed. The output indicates that the playbooks were successful on both `server1` and `server2`.

```
jalene@workstation:~/CPE212_31S1$ ansible-playbook playbook.yml -K
ok: [server1]
ok: [server2]

TASK [Install MariaDB] *****
changed: [server1]
changed: [server2]

PLAY RECAP *****
server1      : ok=2    changed=1    unreachable=0    failed=0    skipped=0    rescued=0
server2      : ok=2    changed=1    unreachable=0    failed=0    skipped=0    rescued=0
jalene@workstation:~/CPE212_31S1$
```
